**ESU and SCAPE Research Reported in News Media by Journalists**

Econometric Studies Unit (ESU) has maintained a large econometric model based on annual data since 1988. I took over the ESU activities in 1992 and expanded the model from the initial 24 equations to 115 equations. Subsequently I developed a number of models based on quarterly data. The models in use at present include a multi-country structural VAR model and a Singapore model. The latter formed the basis of my jointly authored book “The Singapore Economy: An Econometric Perspective” published by Routledge in Feb 2007. In Feb 2005 Singapore Center for Applied and Policy Economics (SCAPE) was established within the Department of Economics, NUS and ESU became a unit within SCAPE. Since early 1990s ESU conducted a one-day annual public policy conference in Jan/Feb and a half-day policy forum in Jul/Aug. Under SCAPE the annual conference was converted to a joint affair by the three main universities, NUS, NTU, and SMU.
